Sulphuric acid reacts with calcium carbonate to produce calcium sulphate, carbon dioxide gas and water. $\text{H}_2\text{SO}_4 + \text{CaCO}_3 \rightarrow \text{CaSO}_4 + \text{CO}_2 + \text{H}_2\text{O}$ <i>Asid bertindak balas dengan logam karbonat untuk menghasilkan garam, gas karbon dioksida dan air.</i>

Larutan daripada bikar dituang dengan berhati-hati ke dalam satu kelalang volumetrik 250 cm³ melalui satu corong turas. Botol penimbang dan bikar dibilas dengan sedikit air dan dituang ke dalam kelalang volumetrik. Air suling dituang ke dalam kelalang volumetrik sehingga tanda senggatan. Kelalang volumetrik kemudiannya ditutup dengan penutup dan diterbalikkan beberapa kali untuk mendapatkan larutan homogen. 	1 1 1 1 1 1
